

PENSTOCKS

KWT® HIGH PRESURRE PENSTOCK TYPE: KSA-HD

APPLICATIONS

KWT penstocks are available in various forms and are used in surface, sewer and process water systems. The penstock is a very traditional structure for regulating flows or isolating a pipe, using a simple yet effective drive system.

OPERATION

As a new addition to the already popular KSA range, the KSA-HD has been developed as a high-specification product for large, heavy-duty applications, and is suitable for on and off seating pressures of 10MwC as a standard.

The KSA-HD is particularly suitable for process, tidal and emergency applications where operational safety plays a decisive role. The penstock is manufactured in Stainless Steel 316L as a standard however higher grades are also available.

The sealing system on the KSA-HD is unique, in that the entire moving plate rests against a sealing face positioned at an angle of 3°. As the penstock closes, this automatically wedges the seal, compressing it evenly and producing a virtually drop-tight seal between the frame and plate. To ensure a tight seal between the frame and wall, there is a cavity in the back of the frame which is filled with grout to fill any pockets in the mounting face.

The KSA-HD is also unique in that the penstock does not require a cross-beam to pull the penstock door upwards, as it incorporates a patented spindle block arrangement located at a central point just above the opening. This reduces the risk of damage to the spindle and also makes the KSA-HD very compact.

BENEFITS

Virtually no maintenance.

Excellent Sealing.

Fast installation.

Very compact construction.

SPECIFICATIONS

Culvert	: Ø 500 mm to Ø 2000 mm : 500 mm x 500 mm to 2000 x 2000 mm
Operating pressure	: On/Off seating, 10 MwC as standard
Operation method	: manual or actuated
Operation point	: conical square 27/32x40
Movement mechanism	: non-rising spindle
Higher pressures and sizes delivered on request.	

MATERIALS

Moving plate	: Stainless steel 316L
Spindle	: Stainless steel 316
Spindle Block	: POM or Gbr12
Bearing ring	: OLG
Backplate	: RVS 316 L
Sealing	: EPDM
Mounting material	: Stainless steel 316

Description for tenders

Penstock, type KSA-HD

Manufactured by: KWT Waterbeheersing

Materials: SS316L, HDPE and EPDM

Passage: Ø 500 mm to Ø 2000 mm 500 x 500 to 2000 x 2000 mm

Operating pressure: 10MwC On/ Off seating.

The penstock is equipped with a vertical spindle, with a centrally mounted bearing block. This reduces force on the spindle, reducing the risk of damage. The guides are made up using box profiles to ensure the anchors experience the correct loading. The SS316L moving plate has been equipped with an EPDM profiled seal and can be fully adjusted in relation to the mounting face that slants by 3 degrees. The KSA-HD is also designed so that spindle and seal replacements can be carried out without removing the penstock from the wall in case of damage.
